

# Science Grade 7 – PLATE TECTONICS

## Student Learning Expectations

The student should be able to:

1. Demonstrate knowledge of Earth's interior and distinguish the Earth's layers and their function(s)

2. Describe lithospheric plate movement and demonstrate

how geological events result from this movement.

3. Understand how landforms can be created by constructive and/or destructive forces.

4. Understand that Earth is over 4 Billion years old, and different events have occurred on Earth during different periods of time.
